

**AMENDMENT TO THE SPECIFICATION**

Please amend the specification by inserting the following replacement paragraph on a separate page after page 16 as follows.

**Abstract**

An approach is provided for game applications on cellular phone devices. It also relates to reducing communication load of mobile communication networks for downloading high quality game software to cellular phone devices. The approach further relates to a method, a download device and a game enabled cellular telephone device for downloading game software for a cellular phone from a server to the cellular phone via a download module and a data network connection. The approach is based on establishing a local connection between the cellular phone and the download module, establishing a data network connection between the server and the download module, and starting a game download from the server, via the data network connection and the local connection through the download module to the cellular phone.
